Session 2A:

Benefits to Cloud Connectivity of Your Life Safety System

Until very recently, there was no way for the people responsible for the safety of a buildings occupants to view what was happening on the premises fire alarm system without being on site or receiving a phone call from a third-party. However, fire alarm systems have finally moved into the 21st-century offering detailed visibility of system events even to someone offsite via a handheld device. This is done by enhancing the existing connection to offsite monitoring service by using that same connection to also send signals to a "cloud connected" server. This presentation will detail the new functions that are available because of the new connection as well as the architecture to make it happen.

Don Austin
Honeywell

Don is currently an Enterprise Regional Sales Manager for Honeywell Fire. In that role, he works closely with the areas authorized vendors ensuring that they are trained and well versed on Honeywell technologies. Don holds a NICET Level IV in Fire Alarm Systems certification as well as "Qualifying Agent" licenses in several southeastern states. Don has held many positions in the Fire Alarm industry including technician, CAD designer, Project Manager, Fire/Security Division Manager and currently Enterprise Regional Sales Manager.
